WORK EXPERIENCE

Pepsi **Jun. 2025 – Jul. 2026**
Warehouse Supervisor *Ottawa, ON*

- Supervised approximately 100 personnel across multiple logistics departments, coordinating daily staffing, priorities, and workload across shifts.
- Ran daily scrum meetings to assign responsibilities, track progress, and ensure weekly shipping quotas were consistently met.
- Oversaw monthly health and safety audits and accident reporting, maintaining site compliance and documenting incidents for follow-up.
- Reorganized product sequencing and item weighting procedures, improving picking efficiency by 20% and reducing product breakage.
- Built Excel and Power BI dashboards tracking productivity, breakage, and on-time shipping, and reported results to management.
- Helped roll out a company-wide SAP and Microsoft Azure migration at my site, which cut processing time for sales orders, deliveries, and invoicing by 40%.

Thermo Fisher Scientific **Sep. 2022 – Sep. 2023**
Reliability Engineer Intern *Mississauga, ON*

- Wrote SQL queries against the IBM Maximo asset database to pull and validate maintenance records, then built a Power BI pipeline that made company-wide KPI reporting 80% faster.
- Led deviation investigations at a GMP-regulated pharmaceutical plant, applying root cause analysis and the 5 Whys to isolate equipment failures.
- Used Python to automate the recurring data pulls and presented failure patterns to management, leading to scheduling changes that cut unplanned downtime by 20%.

Pryor Metals **Apr. 2022 – Aug. 2022**
CNC Machine Operator *Ottawa, ON*

- Interpreted engineering drawings and GD&T tolerances to ensure CNC Turret Punch Press was operating withing specifications.

PROJECTS

ApplAi – AI Job Application Tracker

- Built a full-stack application on Next.js, TypeScript, Prisma, and PostgreSQL with an LLM extraction pipeline using function calling and versioned re-extraction history.
- Implemented a retrieval-augmented chat interface over vector embeddings, routing each query between SQL and vector search based on intent.

Smart Fan (Breezy)

- Built a smart fan on a Raspberry Pi that locates room occupants with a TensorFlow Lite MobileNet SSD model on a Google Coral Edge TPU at 25 FPS, then aims airflow at them through servo PWM.
- Owned the motor control module: a Flask web server and threaded Python services letting browser and voice commands drive the DC motor concurrently.

EDUCATION

McMaster University **Dec. 2024**
B.Eng., Computer Engineering *Hamilton, ON*

SKILLS

Languages: Python, SQL, TypeScript, Java, C++
AI/ML: LLMs, RAG, Vector Embeddings, TensorFlow Lite
Tools & Platforms: Power BI, Excel, SAP, IBM Maximo, PostgreSQL, Next.js, React.js, Flask, Git, Linux
Engineering: Root Cause Analysis, PLC Programming, PCB Design, EPLAN, MATLAB/Simulink
